

Section 13.1 - Vector Functions & Space Curves

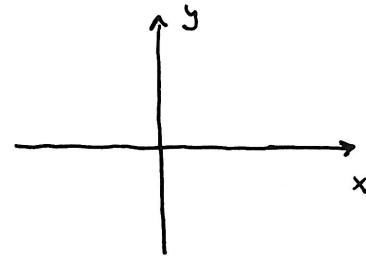

MVC

- Vector Functions:

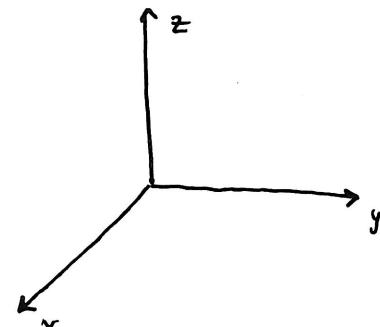

- $\lim_{t \rightarrow a} \vec{r}(t) =$

- $\vec{r}(t)$ is continuous at $t=a$ if

Example 2 Find $\lim_{t \rightarrow 0} \vec{r}(t)$ where $\vec{r}(t) = (1+t^3)\vec{i} + t e^{-t}\vec{j} + \frac{\sin t}{t}\vec{k}$

- A space curve C

Example 4 Sketch the curve whose vector equation is $\vec{r}(t) = \langle \cos t, \sin t, t \rangle$

Question: How can Ex. 4 be changed to spiral clockwise?

Section 13.1 - Vector Functions & Space Curves

MVC

Example 5 Find a vector equation and parametric equations for the line segment that joins the point $P(1, 3, -2)$ to $Q(2, -1, 3)$.

Example 6 Find a vector function that represents the curve of intersection of the cylinder $x^2 + y^2 = 1$ and the plane $y + z = 2$.

Example Use a computer to graph the Toroidal Spiral

$$x = (2 + \sin 20t) \cos t \quad y = (4 + \sin 20t) \sin t \quad z = \cos 20t$$

• Extra Examples

#27 Show that the curve: $x = t \cos t$, $y = t \sin t$, $z = t$ lies on the cone $z^2 = x^2 + y^2$ and use that to help sketch the curve.

#41 Find the vector function that represent the curve of intersection of the cone $z = \sqrt{x^2 + y^2}$ and the plane $z = 1 + y$.

#48. Two particles travel along the space curves:

$$\vec{r}_1(t) = \langle t, t^2, t^3 \rangle \quad \text{and} \quad \vec{r}_2(t) = \langle 1+2t, 1+6t, 1+14t \rangle$$

Do the particles collide? Do their paths intersect?

* Cool: Watch video on space filling curves: youtube.com/watch?v=RUI0wSciJ3b0
